

# **Appraisal top tips: getting it right in no time** (well 10 minutes to be precise)

Dr Claire Rushton

GP Roman Road Health Centre, Blackburn

Vice Chair & Education Lead Family Doctor Association

*Delivering the difference*

# Relevant and diverse

- Make your evidence relevant and diverse to demonstrate development in all your roles.
- Vary your learning environment
- Tick GMP boxes to illustrate that you have covered all areas

# Things that have changed

- SEA
- Impact
- Audit
- Reflection

*Delivering the difference*

# What is QI?

- Any activity that demonstrates change in practice; quality innovation, application of learning, audit, mini audit, case reviews, PDSA, puns and dens, teaching, feedback, for example.
- Credited at 1 point per hour of learning
- Any ideas about how to obtain QI credit points from today's learning?

# Stick at 50 (I wish)

- You only need 50 points. If you have covered all areas, done your PDP and some QI (and MSF/PSQ if indicated) give yourself a break! (and your appraiser)
- Think before you add anything to your evidence. What does this add to my portfolio that's not already there?

# RMS and pre-appraisal reflection why do they matter?

- Do your pre-appraisal reflection
- Fill in the box on the portfolio - demonstrates to your appraiser you have thought about your learning/relevance.
- RMS is a series of boxes for your appraiser to tick = you have followed the principles of appraisal
- Include a MAG form. Goes to the RO and helps inform who may need further input.
