**P**ain  
**U**rinary frequency or Urgency  
**B**loating/distention of the abdomen – increased dress size  
**S**atiety – feeling full early

Women presents to GP  
50+ / Post Menopausal

**Post Menopausal Women** report having any of the following, new symptoms on a persistent basis (particularly more than 12 times per month)

- Persistent abdominal distention (bloating)
- Feeling full (early satiety) and/or loss of appetite
- Pelvic or abdominal pain
- Increase urinary urgency and/or frequency
- New onset IBS symptoms in last 12 months in women over 50
- FH ovarian/bowel/breast cancer

? Symptoms may be suggestive of ovarian cancer

**Physical Examination** including abdo and VE

Abnormal Exam:  
Ascites/pelvic abdo mass, not obviously fibroids

Normal Exam, measure CA125

CA125 raised  
≥35

CA125 normal  
<35

Arrange ultrasound, mark **URGENT SUSPECTED OVARIAN CANCER** and put **CA125 abnormal =Put result on the form.**  
**Fax the form and check it has been received**

Consider other causes, however Ovarian disease is not excluded  
Assess clinically  
Repeat CA125

Abnormal Refer 2WW

Ultrasound normal  
Assess clinically consider other causes of raised CA125
